How would a 20% tax savings on payroll costs look on your bottom line next year?

Employers who give people on public assistance a chance to work again get a lot more than willing workers. They get tax credits that can substantially reduce employment costs.

The law permits you to claim a special credit on your employer's Federal income taxes. Plus added reimbursements for job training costs to cover most of what it makes dollars and sense for employers.

GOOD NEWS FOR HOMEMAKERS

PEACHES

A great many varieties of peaches are grown and in abundance in Virginia this year. These varieties fall into two general types: freestone (flesh readily separates from the pit) and clingstone)flesh clings tightly to the pit).

Select peaches which are fairly firm or becoming a trifle soft. The skin color between the red areas should be yellow or creamy.

Avoid very firm or hard peaches with a distinctly green ground color as they are immature and probably will not ripen satisfactorily. Also avoid overripe peaches and those with large bruises or signs of decay. Decay starts as a pale tan spot which expands in a circle.

A bushel of peaches weighs about 48 pounds and will yield about 18 quarts of canned or frozen peaches.

CANNING PEACHES

Wash peaches and remove skins. Dipping each peach in boiling water, then in cold water makes peeling easier. Cut peaches in halves; remove pits. Slice if desired. To prevent fruit from darkening, use citric or ascorbic acid. Follow package directions regarding use. An older but less effective method of preventing darkening is to drop peach halves or slices into water containing 2 tablespoons each of salt and vinegar per gallon of water. The peaches treated in this way must be drained before packing.

Use a thin, medium, or heavy syrup to suit the sweetness of the fruit and family preference. A thin sirup (30 percent) is made with 2 cups sugar and 4 cups water or juice. Use 3 cups of sugar for a medium sirup (40 percent) and 4¾ cups sugar for a heavy sirup (50 percent). Sugar improves the flavor and texture of canned peaches but can be omitted.

RAW PACK Pack raw peaches in jars. Cover with boiling sirup, leaving ½ inch headspace. Remove air bubbles by running spatula or knife between jar and food. Adjust jar lids.

Process in boiling water bath canner (212°F.).

Pint jars ..... 20 minutes
Quart jars ..... 25 minutes

A boiling water bath is where jars of food are placed on a rack in a canner or kettle filled with hot water. The water level should be 1 inch above the tops of the jars.

FREEZING PEACHES

Wash peaches and remove skins and pits. It is better not to use a boiling water dip when peeling peaches to be frozen. Slice if desired.

Sirup pack. Drop peaches into cold sirup to which citric or ascorbic acid has been added to prevent darkening of peaches. Pack peaches into containers. Add sirup to cover. Place a piece of crumpled waxed paper on top of the peaches to hold them under the sirup. Leave ½ to 1½-inch headspace - the smaller amount for wide topped pint containers; the larger amount for narrow topped quart containers. Seal. Freeze; store at 0°F. or below. Use a sirup to suit the sweetness of the fruit and family preference. Allow ½ to ⅔ cup sirup for each package of peaches depending on size of container. Refer to sirup recipe for canning.

Sugar pack. Add ⅔ cup sugar and citric or ascorbic acid dissolved in cold water to each quart of prepared fruit. Mix well. Pack into containers leaving headspace as in sirup pack. Seal. Freeze; store at 0°F. or below.

Unsweetened pack. Pack peaches into containers and cover with cold water containing ascorbic or citric acid. Leave headspace as in sirup pack. Seal. Freeze; store at 0°F. or below.
